Geodatabases are something Iâ™ve frequently encountered in my GIS work, but prior to working through this book I had little experience with them. I didnâ™t understand their purpose or why using one was better than working with individual shapefiles, and for whatever reason even my GIS classes in grad school didnâ™t emphasize them. The Getting to Know ArcGIS Desktop book for version 9.3 was very useful in my introductory GIS course, so I went looking for something similar that dealt with more âœadvancedâ• topics. Well lo and behold, ESRI Press came out with just such a book back in 2011 for the release of version 10. GIS Tutorial 3 deals almost exclusively with geodatabases, and it uses the same step-by-step format that I originally learned the basics with. I wonâ™t go into details about whatâ™s covered â€” lets you view the table of contents and whatnot for free â€” but some of what I learned here I was able to immediately apply at work. It turns

out I actually enjoy importing feature classes into geodatabases and lining up fieldsâ |hmmmâ |For the most part the tutorials and exercises work out as intended, and the review questions at the end of each exercise are pertinent and thoughtful. The only issues I have with the book are minor. Chapter 6 begins with how to customize a toolbar, which is something that would make more sense at the beginning of the book (assuming itâ™s included at all). Thatâ™s followed in section 6-2 by a Python script tutorial, but donâ™t expect to learn scripting from it. There are entire books on scripting, so if you want to learn it check one of those out (not to mention I couldnâ™t get Exercise 6-2 to work). Given that Chapter 5 covers geodatabase topology and 7 covers ModelBuilder, 6 feels like a random afterthought.
